How Does It Work?

Vena for Microsoft Dynamics 365 Business Central is a purpose-built native integration between the Vena Complete Planning Platform and Microsoft Dynamics 365 Business Central.

Setting up your Microsoft Dynamics 365 Business Central connection is quick and easy and based on your requirements.

How Vena Partners With You

Vena or your Vena Services Partner provides best practices throughout the process and works with your team to determine the appropriate data integration method based on your requirements.

We will work with your team to:

- Review Vena and Business Central integration requirements
- Configure the Vena Business Central Connector
- Load data into Vena
- Guide you through best practices to validate source data

We need your team to:

☑ Provide a resource with knowledge and understanding of Business Central

☑ Ensure the resource can identify objects and tables required for integration to bring over the required data

☑ Ensure the resource has permission to install extensions in your Business Central instance

☑ Validate completeness and integrity of the data

☑ Provide a one-time historical data in a CSV file
